TRIGONOMETRIA ARTIFICIALIS:

SIVE

MAGNVS CANON TRIANGVLORVM LOGARITHMICVS

ad Decadas Secundorum
Scrupulorum conſtructus.

TRIGONOMETRIA ARTIFICIALIS:

SIVE

MAGNVS CANON TRIANGVLORVM LOGARITHMICVS,

Ad Radium 1000000, 00000, & ad dena Scrupula Secunda, ab ADRIANO VLACCO Goudano Conſtructus.

Cui Accedunt

HENRICI BRIGGII Geometriæ Profeſſoris in Academiâ Oxonienſi P. M. Chiliades LOGARITHMORVM Viginti pro numeris naturali ſerie creſcentibus ab Vnitate ad 20000, unde Canon iſte deductus eſt.

Ad quorum uſum illuſtrandum, additus eſt Liber Secundus TRIGONOMETRIÆ BRITANNICÆ, in quo TRIANGULA PLANA & SPHÆRICA calculo facillimo, eximijſq; compendijs è Geometricis fundamentis petitis reſolvuntur.

Ex Angulis Latera, vel ex Lateribus Angulos, et mixtim, in Triangulis tam planis quàm Sphæricis, aſſequi, ſumma gloria Mathematici eſt: Sic enim Cœlum, et Terras, et Maria fœlici et admirando calculo menſurat. *Franc. Vieta.*

GOVDÆ,
Excudebat Petrus Rammaſenius

ANNO M.DC.XXXIII.

Cum Privilegio.

ILLVSTRISSIMO PRINCIPI AC DOMINO,

DN. CAROLO LVDOVICO,

COMITI PALATINO AD RHENVM. S. ROM. IMPERII ARCHIDAPIFERO & ELECTORI, DVCI BAVARIÆ, &c.

Domino ſuo Clementiſſimo.

ILLLVSTRISSIME PRINCEPS ELECTOR,

QVòd ILLVSTRISSIMÆ TVÆ CELSITVDINIS Nomen huic Libro præfixerim, eundemque ILLVSTRISSIMÆ TVÆ CELSITVDINI humiliter nunc offero, id quidem ex Æquitatis jure me debere exiſtimo: Poſtquàm enim numeri hujus Canonis Triangulorum Logarithmici ſunt derivati ex numeris eorum Naturalibus, quos OPVS PALATINVM inſigni liberalitate & benèficentiâ SERENISSIMI PRINCIPIS FRIDERICI IV. TVÆ CELSITVDINIS Avi piæ ac laudatiſſimæ memoriæ in Mathematicæ diſciplinæ Rempublicam collatum, mihi ſuppeditavit, æquum videbatur eundem ſub ILLVSTRISSIMI PRINCIPIS PALATINI auſpicio publicum facere, & debitæ meæ gratitudinis teſtimonium exhibere: præſertim cùm T. C. inter alias artes, ſcientias, atque linguas, in Mathematicis ſummâ induſtriâ verſet, mirificéque delectetur. Quamobrem precor, ut hâc meâ quâlicunque

operâ T. C. adjuta, tantò ferventiore zelo in hoc divino ſtudio continuet, quantò calculus Trigonometricus prę uſitatâ formâ per Sinus, Tangentes, & Secantes, facilior ac compendioſior hìc exhibetur; Quod ſi T. C. fecerit, magnum Nomen ad omnem poſteritatem ſibi comparabit, quemadmodùm GVILIELMVS HASSIÆ LANDGRAVIVS, & MAVRITIVS PRINCEPS AVRAICVS, TVÆ CELSITVDINIS ille AB-AVVNCVLVS, hic PRO-AVVNCVLVS, alijque laudatiſſimi Reges atque Principes, ex Mathematicarum artium doctrinâ ſummam gloriam ſunt adepti, adeò ut eorum Memoria etiamnùm à Nobis celebretur, & ad finem uſque Mundi honorificè celebrabitur.

Id faxit DEVS, ILLVSTRISSIMAMQVE TVAM CELSITVDINEM, unà cum ILLVSTRISSIMA TVÆ CELSITVDINIS MATRE, ILLVSTRISSIMISQVE FRATRIBVS ac SORORIBVS, diu incolumem ſervet, & pacificâ Hæreditatis Avitæ poſſeſſione quàm primùm frui, imò florere, fœliciterque regnare dignetur.

Dabam GOVDÆ Anno N.C. 1633. Die 26 Aprilis.

ILLVSTRISSIMÆ T.C.

Addictiſſimus

A. Vlaccus.

Mirificus Logarithmorum usus à primo tempore quo illum cognovi, adeò Mihi semper arrisit Candide Lector, *ut quæcunque ad faciliorem & perfectiorem nobilissimæ Matheseos praxim illorum adjumento conducere videbantur, summis viribus promovere & publici juris facere conatus sim: Cum enim in primâ editione Londinensi* Arithmeticæ Logarithmicæ *Doctissimi* D. Henrici Briggii *Logarithmos numerorum à* 20000 *ad* 90000 *maximè desiderari vidissem, quanquàm sine multis vigiliis confici non poterant, incredibili tamen animi cum voluptate laborem istum aggrediebar, atque integrum Opus ad tempus Mihimet ipsi præfixum ad optatum finem perducebam. Rogatus deinde à Clarissimo Viro* D. Briggio P.M. *an* Canonem suum Sinuum, Tangentium, & Secantium, & Logarithmorum pro Sinubus & Tangentibus ad Gradus & Graduum Centesimas, & ad Minuta & Secunda Centesimis respondentia, *quem ante multos annos construxerat, Meis impensis & curâ typis mandare vellem, libentissimè voto ejus annui, tùm quòd* Graduum *partitio in* Centesimas *præ* Sexagenariâ *hactenus usitatâ longè præstantior propter facilitatem calculi Mihi videbatur, & à Viris quibusdam eruditissimis jamdudum æstimata est, tùm quòd insignem istum Geometram usum ejusdem Canonis elegantissimè illustraturum, omnibusque aliis qui in hoc genere scripserunt, palmam erepturum confidebā. Quod Opus* (Trigonometriā putaBritannicam) *licet Autor ipse propter subitam ejus è terris emigrationem haud integrum finierit, doctissimi tamen Viri* D. Henrici Gellibrand Astronomiæ in Collegio Gresshamensi apud Londinenses Professoris & Mathematici solertissimi *operâ absolutum, etiam in lucem venire procuravi. Deinde mecum perpendens non omnes Mathematicarum artium cultores æquè avidè novum istum Canonem ad usus suos excepturos, cùm quòd natura plerorumque hominum ægrè propensa sit à consuetudine discedere, tùm quod Autores omnes Mathematici, quorum Opera in studiosorum manibus versantur, partibus* Graduum Sexagesimis *hactenus usi sunt; Videns quoque differentias Logarithmorum* Sinuum & Tangentium *in prioribus & posterioribus Quadrantis* Gradibus *valdè inæquales esse, imò magis enormiter discrepare quàm* Sinuum, Tangentium, & Secantium, *unde manifestum est per Canonem Logarithmorum pro* Sinubus & Tangentibus *ad* Gradus & Graduum Scrupula prima, *sive ad* Centesimas *constructum, desideratam exactitudinem quæ sæpissimè (præcipuè autem in* Astronomiâ) *requiritur, acquiri non posse, ut calculus Trigonometricus certior & facilior redderetur, placuit etiam* Canonem hunc Logarithmorum pro Sinubus & Tangentibus ad decades secundorum scrupulorum *ante annos tres à Me constructum, in eruditi hujus Orbis Solem producere.*

Scio Benjaminem Vrsinum Mathematicum Electoralis Brandenburgici *doctissimum simili ferè modo Canonem Logarithmorum ante annos aliquot edidisse, sed istorum species longè ab horum diversa est: Illi enim ex eodem fonte promanarunt unde Illustrissimus atque Ingeniosissimus Vir* D. Ioannes Neperus Baro Merchistonij *primus Logarithmorum inventor suos deduxit, quos primùm in lucem prodire voluit donec alij conficerentur, quos* D. Briggius *ex ejus sententiâ postmodùm construxit, unde hi quoque orti sunt: quorū inventionis modus à Me servatus sic se habet. Primùm Logarithmos* Sinuum *à* 45 Grad. *usque ad finem Quadrantis qui habentur in* Opere Palatino, *investigavi ope* Chiliadum Centum Logarithmorum *de quibus supra dixi, juxta modum qui hic traditur pag.* 4. *quos adeò exactè ita acquisivi, ut in numeris tam magnis supra unitatem in postremâ eorum notâ nihil abundet sive deficiat. Ex illis deinde reliquos omnes Logarithmos* Sinuum *ab initio Quadrantis usque ad* 45 Gradus *per solam Additionem & Subductionem inveni juxta hanc Regulam;* Duorum arcuum Quadrantē conficientium, si Logarithmus Sinus minoris duplicati addatur Logarithmo Sinus 30 Graduum, & à summâ subtrahatur Logarithmus Sinus majoris, reliquus erit Logarithmus Sinus minoris; *Cujus rei demonstrationem videre licet in* Trigonometriâ Btitannicâ Cap. 16. *Atque sic acquisitis Logarithmis* Sinuum, *Logarithmos* Tangentium *per solam Subductionem habere potui. Cum enim* Sinus *quilibet est ad* Sinum Complementi, *ut* Radius *ad* Tangentem, & Radius *sit medius proportionalis inter* Tangentes *arcus cujuslibet &* Complementi, *si è Logarithmis*

rithmis Sinuum *semiquadrantis* (*addito* Radii *Logarithmo*) *subtrahantur Logarithmi* Sinuum complementorũ, *comparantur Logarithmi* Tangentium *ejusdem semiquadrantis; quibus deinde subductis è duplo* Radii *Logarithmo, habemus Logarithmos Tangentium reliqui semiquadrantis: Atque ita totum Canonem absolvi. Quod autem Logarithmos* Secantium *omiſi, has ob causas consultum duxi.* 1. *Ne Canon per se satis magnus in nimium volumen creſceret.* 2. *Quòd sine istis omnium Casuum resolutiones æquè commodè absolvi poßint.* 3. *Quòd (si quis iis uti volet) facillimè inveniantur: Cùm enim* Radius *sit medius proportionalis inter* Sinum *quemlibet &* Secantem complementi, *si è duplo* Radii *Logarithmo auferatur Logarithmus* Sinus *alicujus arcus, reſtabit Logarithmus* Secantis complementi: *Quoniam verò Triangula Plana solius hujus Canonis ope resolvi non possunt, sed Logarithmi numerorum vulgarium istuc quoque requiruntur, ut Opus hoc ad integram Trigonometriam exercendam absolutum exhiberem, visum fuit adjungere Logarithmos numerorum ab Vnitate ad* 20000, *quorum ope negotium istud plenariè perfici potterit.*

Ad usum horum Logarithmorum in dimensionibus Triangulorum Planorum & Sphæricorum illustrandum, eandem formam secutus sum quæ habetur in Libro secundo Trigonometriæ Britannicæ, *paucis additis & ablatis prout diversitas instituti postulare videbatur. Postquam enim Industrius Vir* D. Henricus Gellibrand *multa nova eximiaque calculi compendia ibi exhibuit, perspicuas demonstrationes addidit, & concinnè admodùm omnia dispoſuit, putavi me rem Mathematum studiosis gratam utilemque facturum, si ea unmeris hisce adaptarem.*

Quando numerus occurrit cui linea subscribitur, notæ illæ quæ supra lineam sunt descriptæ, Numeratorem partium constituunt, quarum Denominator semper intelligitur unitas cum tot cyphris quot sunt notæ superius positæ. Vt $3\,\frac{43}{}$ *designant* $3\frac{43}{100}$. *Sic* gr. 22: 53′: 30″ $\frac{3679}{}$ *designant* gr. 22: 53′: 30″ *&* $\frac{3679}{10000}$ *partes scrupuli secundi.*

Postremò, Lectorem non ignorare velim, me in editione hujus Canonis Triangulorum *summam adhibuisse diligentiam, ut ab erratis Typographicis purus traderetur: scio enim quanti ea res sit momenti, & quàm fœdè doctorum Virorum Opera Typographorum negligentiâ sæpißimè contaminentur, atque ideò sedulus corrector ei semper adfui, numeroſque omnes inter corrigendum diligenter examinavi, subducendo scilicet Logarithmos* Sinuum *semiquadrantis è Logarithmis* Sinuum suorum complementorum, *unde Logarithmos* Tangentium *provenire supra dixi, quos si in Canone respondere comperiebã, de impreßionis eorum fide certus eram, sin minus, alicui illorum errorẽ ineſſe constabat, qui corrigendus erat. Eodem modo usus sum pro examinatione Logarithmorum* Tangentium, *eos scilicet subducendo è duplo* Radii *Logarithmo, unde Logarithmi* Tangentium suorum complementorum *procedere debebant; Et sic quoque differentias Logarithmorum omnes exploravi, addendo videlicet differentiam Logarithmorum* Sinus *cujusvis arcus & proximè sequentis, differentiæ Logarithmorum* Sinus complementi *ejusdem & proximè sequentis, quarum aggregatum ubique æquale esse oportet differentiæ Logarithmi* Tangentis *eiusdem arcus & immediatè sequentis: Quæ res quanti æstimanda sit, judicabunt qui intelligunt. Voluiſſem quidem similem curam adhibere pro reliquis numerorum vulgarium Logarithmis, niſi aliæ occupationes tùm temporis impediviſſent; attamen erratis quæ post eorum impreßionem animadverti, atque ad calcem Vigesimæ Chiliadis annotavi, correctis, habebis etiam istos numeros omni (uti confido) vitio carentes.* Vale.

TRIGONOMETRIÆ ARTIFICIALIS LIBER PRIMVS

De Triangulis Planis.

CAPVT PRIMVM.

PRiusquam ad Canonis noſtri uſum illuſtrandum accedamus, pauca de natura Logarithmorum quo poſſumus compendio præmittemus; ut qui Doctiſſimi *D.Briggij* Arithmeticam Logarithmicam non viderint, affectiones illorum ex iis cognoſcant & ſuaviorem ex fructibus guſtum percipiant.

Logarithmi ſunt numeri qui proportionalibus adjuncti æquales ſervant differentias; ideoque non incommodè dici poſſunt *numerorum proportionalium comites æquidifferentes.*

Vt datis numeris continuè proportionalibus 1,2,4,8,16,32,64,128,256, poterunt iis pro Logarithmis adjungi numeri inſigniti A,vel B, vel C, vel D,vel alij, modò hoc unicum obſervetur, ut Logarithmorum unâ creſcentium vel decreſcentium differentiæ ſint æquales quoties numeri quibus ſunt adjuncti ſunt proportionales.

Atque ut natura & affectiones horum Logarithmorum melius cognoſcantur, ſequens Lemma conſideretur.

Numeri proportionales.	*Logar.* A	*Logar.* B	*Logar.* C	*Logar.* D
1	1	5	5	35
2	2	6	8	32
4	3	7	11	29
8	4	8	14	26
16	5	9	17	23
32	6	10	20	20
64	7	11	23	17
128	8	12	26	14
256	9	13	29	11

LEMMA.

Si e quatuor numeris, quantum primus ſuperat ſecundum, tantundem tertius ſuperat quartum: erit ſumma primi & quarti æqualis ſummæ ſecundi & tertij. & contra.

Vt datis 9. 5. 15. 11. numerus primus 9 excedit ſecundum 5, quantum tertius 15 quartum 11, nempe 4; atque ideo ſummâ tam mediorum quam extremorum eſt 20. Itaque

E quatuor numeris proportionalibus,Logarithmus primi ablatus è ſumma Logarithmorum ſecundi & tertii,relinquet Logarithmum quarti.

Veluti ſi dati ſunt tres numeri proportionales 64.8.256. & quæritur quartus,ad quem tertius eandem habet rationem quam primus ad ſecundum. Adde Logarithmos ſecundi & tertii 4 & 9 (in Columna A,) ſumma eſt 13, ex qua aufer Logarithmũ primi 7,reliquus 6 erit Logarithmus 32 quarti proportionalis quæſiti.

Quia enim (ex hypotheſi) primus numerus habet proportionem ad ſecundum quam tertius ad quartum: Logarithmi autem primi & ſecundi (ex eorum definitione) eandem habent differentiam quam Logarithmi tertij & quarti: Ideo (per Lemma) ſumma Logarithmorum primi & quarti æquatur ſummæ Logarithmorum ſecundi & tertii.

Licet autem poſſimus Logarithmorum plures ſpecies iiſdem numeris ad hunc modum aptare, eſt tamen commodiſſimum unica tantum uti ſpecie, eâque quæ o ſtatuit pro Logarithmo unitatis, quod ea præ cæteris omnibus uſum præbeat ad omnia accommodatiſſimum & maxime expeditum: quo poſito hæc duo Axiomata maximi momenti neceſſariò conſequuntur.

I. Primum. *Summam Logarithmorum facientium exhibere Logarithmum facti.* Cum enim ex multiplicationis lege, eadem ſit ratio Vnitatis ad Multiplicantem, quę eſt Multiplicati ad Factum; Vnitatis autem Logarithmus ſit o, manifeſtum eſt ex præcedentibus facti ſolius Logarithmum æquari Logarithmis facientium. Vt hic videmus.

		Logarithmi.
	1	0,00000
Factores	3	0,47712
	27	1,43136
Factus	81	1,90848

Quod ſi Factores plures fuerint; ſumma Logarithmorum eorum omnium erit Logarithmus facti. Vt ſint Factores 2, 8, 64. numerus continue factus ab iiſdem eſt 1024. Ajo hujus Logarithmum æquari Logarithmis trium illorum, ex quorum multiplicatione hic factus proveniebat. Vt hic videmus.

	Logarithmi.
2 . .	0,30103
8 . .	0,90309
64 . .	1,80618
1024 . .	3,01030

CONSECTARIVM.

Hinc manifeſtum eſt Logarithmum numeri alicujus duplicatum, eſſe Logarithmum Quadrati ejuſdem numeri: Et Logarithmum numeri alicujus triplicatum, eſſe Logarithmum Cubi ejuſdem numeri, &c.

	Logarithmi.	
16 . .	1,20412	Veluti Logarithmus numeri 16 duplicatus, eſt Logarithmus 256 Quadrati ejuſdem: & triplicatus eſt Logarithmus 4096 Cubi ejuſdem. Vt hic videmus.
256 . .	2,40824 *dupl.*	
4096 . .	3,61236 *tripl.*	

2. Secundum. *Logarithmum Diviſoris ablatum e Logarithmo Dividendi, relinquere Logarithmum Quoti.* Hoc autem neceſſariò concluditur ex præcedente, quia factus a Diviſore ducto in Quotum eſt ipſe Diviſus: Et idcirco ut unitas ad diviſorem ſic quotus ad diviſum. Vt ſit dividendus 128, diviſor 4, quotus erit 32.

		Logarithmi.
Diviſus	128 . . .	2,10721
Diviſor	4 . . .	0,60206
Quotus	32 . . .	1,50515

Quod

Quod ſi plures Diviſores fuerint, ſumma Logarithmorum eorum omnium ablata e Logarithmo Dividendi relinquet Logarithmum Quoti. Vt ſit dividendus 105, diviſor 7, quotus erit 15, hunc quotum dividat denuo 5, quotus erit 3. Ajo ſummam Logarithmorum 7 & 5 ablatum e Logarithmo 105, relinquere Logarithmum 3. Vt hic videmus.

		Logarithmi.
Diviſor	7	0,84510
Diviſor	5	0,69897
Summa	35	1,54407
Dividendus	105	2,02119
Quotus	3	0,47712

CONSECTARIVM.

Hinc ſequitur ſemiſſem Logarithmi numeri alicujus, eſſe Logarithmum lateris Quadrati ejuſdem numeri: Et trientem Logarithmi numeri alicujus, eſſe Logarithmum lateris Cubici ejuſdem numeri, &c.

	Logarithmi.	
64	1,80618	
8	0,90309 *ſemiſſis.*	
4	0,60206 *triens.*	

Veluti ſemiſſis Logarithmi numeri 64. eſt Logarithmus 8 lateris Quadrati ejuſdem: & triens eſt Logarithmus 4 lateris Cubici ejuſdem. Vt hic videmus.

Atque hæc neceſſariò conſequuntur ſi ſtatuamus Logarithmum unitatis eſſe 0. Quo conſtituto, proximum eſt ut alius quæratur numerus, cujus uſus eſt frequentiſſimus & maximè neceſſarius, eique tribuamus Logarithmum aliquem commodum, qui facillimè & deſcribi quoties opus fuerit & memoria teneri poterit. Ex omnibus autem numeris, nullus videtur Denario præſtantior, aut huic negotio accommodatior, cujus Logarithmus eſto 1,00000,00000. Præcipui igitur Logarithmorum ſunt qui unitati tribuuntur & Denario, iſtis vero proximi iis numeris debentur qui in decupla ratione continuantur, nempe Centenario, Millenario, &c. qui omnes cypris tantum deſcribuntur præter primam notam verſus ſiniſtram, quam *Characteriſticam* appellare poterimus, quod nobis indicet quot notis numerus integer progreditur ultra locum unitatis. Eandem etiam habent Characteriſticam reliqui numeri iiſdem proximi. Vnitatis nempe & omnium integrorum qui unica nota ſcribi poterunt (eorum ſcilicet qui ſunt Denario minores) Characteriſtica eſt 0. Denarii vero & reliquorum uſque ad Centenarium qui duabus notis ſunt deſcripti Characteriſtica eſt 1. A Centenario vero ad Millenarium 2. A Millenario ad decies mille 3. & ſic deinceps, creſcente ſemper Characteriſtica pro numero locorum ultra locum unitatis.

Quod ſi numero integro partes adhæſerint, licet totus numerus pluribus notis ſcribatur: ejus tamen Characteriſtica reſpicit tantum illas notas quibus integræ unitates ſcribuntur, reliquarum ſubſequentium notarum quibus partes adjunctæ exprimuntur nulla habita ratione. ut

	Logarithmi.		*Logarithmi.*
49	1,69019	$4\frac{9}{}$	0,69019
343	2,53529	$3\frac{43}{}$	0,53529
2401	3,38039	$2\frac{401}{}$	0,38039
16807	4,22549	$16\frac{807}{}$	1,22549

Vt Logarithmus 343 eſt 2,53529. cujus prima nota verſus ſiniſtram quam Characteriſticam appellamus eſt 2: quia datus numerus ſitus eſt inter Centenarium & Millenarium. At $34\frac{3}{}$ & $3\frac{43}{}$ licet eorum Logarithmi reliquas notas ſervent eaſdem, primas verſus ſiniſtram mutat uterque. Eſt enim hujus Logarithmus 0,53529 (eo quod $3\frac{43}{}$ eſt denario minor) illius verò 1,53529.

His Logarithmis ita positis, Logarithmi pro numeris intermediis illis ita sunt aptandi, ut summo consensu a principio ad finem usque iisdem legibus optemperent, eundemque quoties usus postulat effectum dent. Inventionis eorum & pro quolibet numero dato modus traditur in Arithmetica Logarithmica *D.Briggij*, juxta quem Canonem nostrum Logarithmorum pro Sinubus & Tangentibus ad Decades secundorum scrupulorum construximus, dimensionibus Triangulorum Sphæricorum præcipuè destinatum, licet & Triangula Plana ejusdem ope resolvi possunt, sed ad hoc Logarithmi quoque numerorum absolutorum requiruntur, atque ideo (ne quid hic desideretur) alteram Tabulam Logarithmorum pro numeris absolutis ab unitate ad 20000 huic pragmatiæ sufficientium, ex Arithmetica Logarithmica *D.Briggij* mutuatam, adjungere visum est, cujus usus consistit in inventione Logarithmorum pro numeris datis quibuscunque; & contra. Operæ pretium igitur erit docere quomodo Logarithmi pro numeris majoribus quam in Tabula continentur, & contra numeri datis quibuscunque Logarithmis congruentes, inveniendi sint. Id autem facilè & accuratè satis pro vulgari usu in dimensione Planorum fieri potest hoc modo.

1. *Quæratur in Tabula Logarithmus congruus quatuor sive quinque notis ad sinistram numeri dati, & observentur notæ remanentes.*
2. *Loco Characteristicæ Logarithmi inventi, substituatur alia numero dato propria.*
3. *Differentia Tabularis Logarithmi inventi & proxime sequentis ducatur in notas remanentes, & a facto abscissis ad dextram totidem notis, reliquus addatur Logarithmo prius invento: summa erit Logarithmus quæsitus.*

Exempli gratia. Scire cupio Logarithmum numeri 2084567839. Primò quæro in Tabula Logarithmum 2084 (nempe quatuor notarum ad sinistram) qui invenitur 3,31889,77146. Secundò pro Characteristica 3, substituo 9; nam in numero dato sunt decem notæ. Tertiò sumo differentiam Tabularem ejusdem Logarithmi & proxime sequentis, nempe 2083447, eamque duco in 567839 (notas in dato remanas;) factus est 1183062461033, a quo abscissis sex notis (totidem scilicet quot remanebant;) reliquus est 1183062, qui additus Logarithmo 9,31889,77146, dat summam 9,31901,60208 Logarithmum numeri 2084567839 quæsitum.

Cum autem hic Logarithmus vero aliquantulum sit minor, quod ex inæqualitate differentiarum Logarithmorum causatur, si quis exactiorem eum habere velit, commodissimè & facillime eum invenire poterit ope Chiliadis vigesimæ primę quæ habetur in Arithmetica Logarithmica *D.Briggij* editionis Goudanæ, in qua habentur Chiliades Logarithmorum Centum, quorum Septuaginta antea desideratos (pro numeris scilicet a 20000 ad 90000) Nos construximus. Cui verò Opus istud præstò non est, multiplicet numerum datum in alium qui factum producat cujus quinque priores notæ versus sinistram incidant in Vigesimam Chiliadem (si commode fieri potest) sive in aliam quam proxime præcedentem, quia differentiæ Logarithmorum in posterioribus Chiliadibus a prædicto morbo fere liberæ sunt. Quærat deinde Logarithmum facti eodem quo præcedente modo, & ex eo subtrahat Logarithmum numeri assumpti pro multiplicante, reliquus erit verus numeri dati Logarithmus.

Vt in hoc Exemplo, multiplicetur 2084567839 in 9, factus est 18761110551, cujus Logarithmus modo præcedente invenitur 10,27325,85425, a quo auferatur 0,95424,25094 (Logarithmus 9;) reliquus 9,31901,60331 est verus Logarithmus quæsitus.

Quando hac scrupulositate opus non est, prior modus retineatur & notæ aliquot ad dextram tam e differentijs quam Logarithmis rejiciantur ut labor multiplicationis aliquantulum diminuatur: Sive potius differentia proportionalis addenda, Logarithmorum ope acquiratur.

Quod si investigandus esset Logarithmus numeri $2084\frac{5678}{}$ sive $20\frac{845678}{}$ &c. eodem modo operari deberemus quo invenimus Logarithmum integri numeri 20845678, Characteristicâ solâ mutatâ, nam illa numerum integrum respicit, ut supra monuimus. Et si Logarithmus quæritur 208400, vel 20840000 &c. idem erit qui 2084, solâ Characteristicâ auctâ pro numero cyphrarum ei adjunctarum.

Venia-

Veniamus jam ad modum inveſtigandi numerum abſolutum e dato quolibet Logarithmo qui in Canone non reperitur. Id autem viâ præcedenti contrariâ perficiendum eſt ut ſequitur.

1. *Characteriſticâ neglectâ, quære quatuor ſive quinque notas reſpondentes in Tabula proxime minori Logarithmo; eaſque ſeorſum pone.*
2. *Differentiam Logarithmorum (dati ſcilicet & inventi) additis prius ad dextram tot cyphris quot notæ præter inventas deſiderantur, divide per differentiam Tabularem Logarithmorum (dato ſcilicet proxime minoris & majoris:) quotus dabit notas ſeorſum poſitis ad dextram adjungendas, & ſic habebis numerum quæſitum.*

Exempli gratia. Scire cupio numerum congruentem Logarithmo 9,31901,60331. Neglectâ Characteriſticâ invenio Logarithmum in Tabula proxime minorem 31889,77146, eique reſpondere 2084, quas pro quatuor primis notis numeri quæſiti ſeorſum pono. Secundo Logarithmum inventum 31889,77146 a dato 31901,60331 ſubtraho, remanet differentia 1183185, cui adjungo ſex cyphras (Characteriſtica enim dati Logarithmi 9 indicat numerum quæſitum conſtare decem notis, quarum ſex inveſtigandæ reſtant;) proveniunt 1183185000000, quo diviſo per 2083447 (differentiam Tabularem) quotus erit 567898 numero prius ſeorſum poſito 2084 adjungendus, atque ita provenit numerus quæſitus 2084567898.

Cum autem numerus hic vero aliquantulum major ſit, quod ex differentiarum inæqualitate cauſatur, ſi quis perfectiorẽ eum habere velit, Logarithmo dato addat Logarithmum alicujus numeri, ut ex eorum aggregato emergat Logarithmus in vigeſimam Chiliadem aut ei quàm proximè præcedentem incidens, & ex eo inveniat numerum abſolutum ut antea, quo deinde diviſo per numerum Logarithmi dato additi, quotus erit verus numerus quæſitus.

Veluti in hoc Exemplo. Logarithmo dato 9,31901,60331 addatur Logarithmus 9, videlicet 0,95424,25094, eorum aggregatum eſt 10,27325,85425, cujus numerus abſolutus modo præcedente invenitur 18761110551, quo diviſo per 9, quotus erit 2084567839 verus numerus quæſitus.

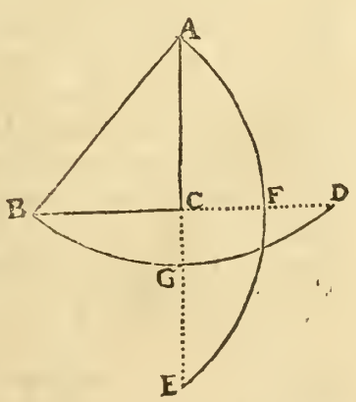
Vt minimo hæc cum labore fiant quando numeris adeo magnis opus non eſt, rejiciantur notę aliquot tam e differentijs quã Logarithmis, ut tædium diviſionis aliquantulum levetur. Sive etiam Logarithmorum ope numerus quæſitus inveſtigetur.

Atque hæc quoad præſens inſtitutum noſtrum de Logarithmis dixiſſe ſufficiat. Qui plura deſiderat, videat Arithmeticam Logarithmicam *D. Briggij*, ubi copioſe reliqua tractantur.

CAPVT II.

PROP. I.

In Triangulo Rectangulo; *Si latus angulum rectum ſubtendens, fiat Radius Circuli; erunt crura Sinus angulorum oppoſitorum.*

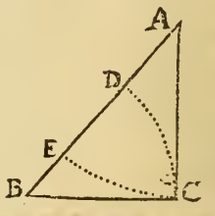


In Triangulo Rectangulo A B C, intervallo A B, & e centris A & B deſcribantur arcus B G D, & A F E; erunt crura A C & B C Sinus angulorum ad A & B: Sunt enim ſemiſſes ſubtenſarum A C E, & B C D.

PROP. II.

In Triangulo Rectangulo; *Si ex utriuſvis acuti puncto angulari, & intervallo Cruris alterius, peripheria deſcribatur; Crus alterutrum erit Radius, reliquum Crus Tangens, Hypotenuſa autem (ſive latus angulum rectum ſubtendens) Secans.*

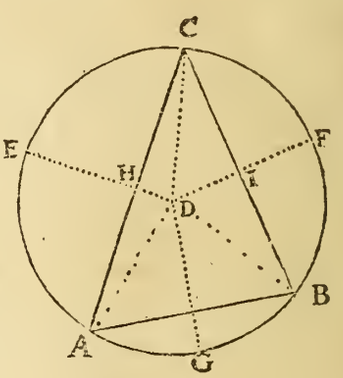
In Triangulo Rectangulo A B C, e puncto angulari B, & intervallo cruris B C, peripheria deſcribatur D C; erit B C Radius, A C Tangens, & B A Secans. Itidem ſi intervallo A C, peripheria deſcribatur E C, erit A C Radius, B C Tangens, & A B Secans anguli B A C.



PROP. III.

In quolibet Triangulo plano; *Latera Sinubus oppoſitorum angulorum ſunt proportionalia; Et contra.*

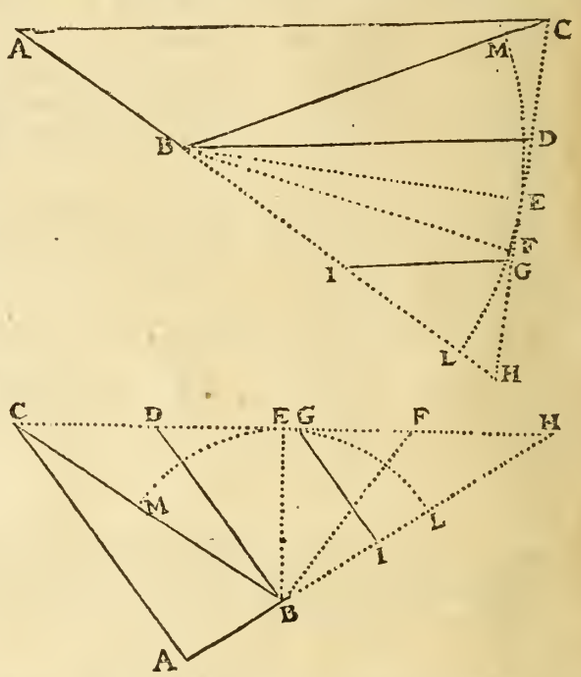
Sit Triangulum A B C, Circulo inſcriptum, & e centro D ducantur Radii perpendiculares D F, D E, D G, tam peripherias quam peripheriarum ſubtenſas biſecantes; Radius etiam ducatur D C. Quoniam itaque angulus in centro E D C æqualis eſt angulo in peripheria A B C; Et C D F æqualis C A B *per 20 prop. 3 Eucl.* Erunt proinde laterum ſemiſſes tanquam Sinus. Quam ergo rationem habet latus C A ad latus C B, eandem habet Sinus C H ad Sinum C I. Nam quæ eſt ratio totius ad totum, eadem eſt ſemiſſis ad ſemiſſem.



PROP. IIII.

In Quolibet Triangulo plano. *Vt ſumma duorum laterum, ad differentiam eorundem; ſic Tangens ſemiſſis ſummæ angulorum oppoſitorum, ad Tangentem ſemiſſis differentiæ eorum.*

In Triangulo obliquangulo A B C, ſint nota latera A B, C B, unà cum angulo A B C ab iiſdem comprehenſo, in ſuperiore obtuſangulo, acutangulo autem in inferiore. Et continuato latere A B in H uſque, ſit B H æqualis B C, & connectentur C & H. Sitque B I æqualis lateri A B. E ſignis quoque B & I ducantur rectæ B D & I G parallelæ lateri A C. Erit ergo angulus exterior C B H æqualis duobus interioribus oppoſitis *per 32 p. 1 Eucl.* Eſt enim angulus C B D æqualis angulo B C A; & D B H angulus, angulo C A B. A puncto præterea B perpendicularis ducatur B E, quæ C H biſecabit. Radio quoque B E peripheria ducatur M E L. Eritque C E Tangens ſemiſſis ſummæ angulorum oppoſitorum, & D E (qui & æqualis F E) Tangens ſemiſſis differentiæ. Quoniam itaque A C, B D, I G, ſunt parallelæ, erunt C D, D G, F H æquales; & idcirco D F & G H æquabuntur. Aio itaque



Proport. { A H / I H / C H / G H = D F } *Vel per æquationem proportionis.*

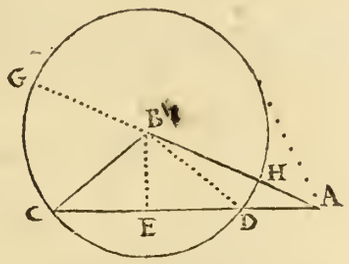
Proport. { A H *Summa duorum laterum.* / I H *Differentia duorum laterum.* / C E *Tangens ½ angulorum oppoſitorum.* / D E *Tangens ½ differentiæ angulorum.* }

PROP.

PROP. V.

In quolibet Triangulo Plano. *Vt Basis, ad Summam laterum; ita Differentia laterum, ad Differentiam segmentorum Basis.*

In Triangulo obliquangulo A B C, sit Basis C A, Summa laterum G A, Differentia laterum H A, Differentia segmentorum Basis A D. Ducatur perpendicularis B E bisecans C D in E. Quoniam itaque oblongum A C, A D æquatur oblongo A G, A H *per 36 prop. 3 Eucl.* erunt propterea latera eorum reciproce proportionalia. Ajo itaque



Per 4 Prop. 6 Euc.

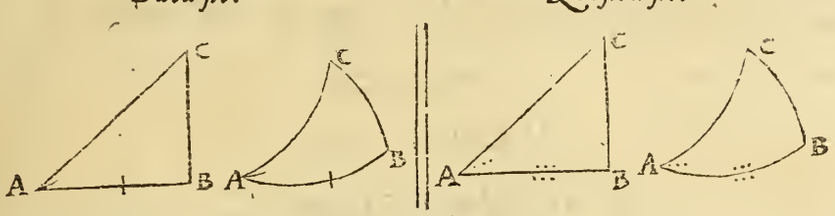
Proport.
- A C *Basis.*
- A G *Summa Laterum.*
- A H *Differentia Laterum.*
- A D *Differentia segmentorum Basis. Inde segmentum* A E *vel* C E.

CAPVT III.

De Dimensione Triangulorum Planorum Rectangulorum.

In Triangulorum omnium solutionibus exprimuntur

Data sic. *Quæsita sic.*



Præterea in Triangulis Rectangulis tam Planis quam Sphæricis, *Hypotenusa* dicatur latus subtendens angulũ rectum, ut Latus A C subtendens angulum A B C. *Crura* autem dicantur quæ angulum comprehendunt rectum, ut latera A B, B C.

CAPVT IV.

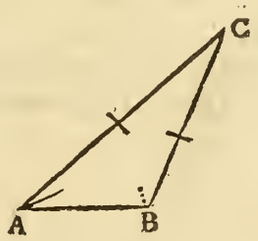
De Dimensione Triangulorum Planorum Obliquangulorum.

PROBLEMA 1.

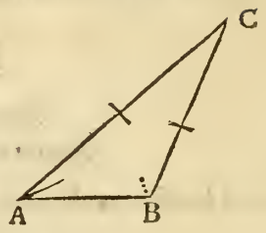
Datis duobus Lateribus & Angulo alteri datorum opposito,
Quæritur ANGVLVS *Lateri reliquo oppositus.*

In Triangulo Obliquangulo A B C, quæritur Angulus obtusus A B C

E datis { Lateribus { A C 1276 7067 / B C 865 1765 } / Angulo B A C *gr.* 37: 26′: 43″ }



Termini Rationis.



Propor. { *Latus alterum.* / *Latus reliquum.* / *Sinus Anguli Lateri alteri oppositi.* / *Sinus Anguli Lateri reliquo oppositi.* per Prop.3.Cap.2.

Illustratio Arithmetica.

		Log. Lat. & Sin.	
Propor.	Latus B C 865 1765	2,93710,471	
	Latus A C 1276 7067	3,10609,114	
	Sinus anguli B A C *gr.* 37:26′:43″ . . .	9,78390,603	
		12,88999,717	*Summa.*
	Sinus anguli A B C *gr.* 116:12′:24″ . . .	9,95289,246	*Differ.*

Hinc per Complementum reliquus angulus A C B *gr.* 26:20′:53″.

NOTA.

Si datus angulus sit obtusus, latus ei oppositum erit majus utrolibet reliquorum, & reliqui duo anguli erunt acuti.

Sin datus angulus sit acutus & dentur latera, incertum erit an angulus lateri majori oppositus sit obtusus, rectus, an acutus; Idem tamẽ erit quartus proportionalis, Sinus nempe anguli acuti vel Complementi ejus ad duos rectos.

Vt igitur scire possimus qualis sit angulus qui maximo lateri opponitur, sumantur summa & differentia maximi lateris & medii (vel minimi) earumque Logarithmi; Et si horum semissis æquetur Logarithmo tertii lateris, angulus maximo lateri oppositus est rectus. Sin Logarithmus tertii lateris fuerit major semisse, angulus erit acutus; sin minor, obtusus. Quemadmodum admonuit doctissimus *D. Briggius* ad Cap. 16. Arithmeticæ Logarithmicæ Editionis Goudanæ.

PROBLEMA 2.

Datis duobus Lateribus cum Angulo ab iisdem comprehenso,
Quæritur ANGVLVS *alteruter reliquorum.*

In Triangulo Obliquangulo A B C, quæritur Angulus alteruter ad B vel C

TRI-

TRIGONOMETRIÆ ARTIFICIALIS LIBER SECVNDVS

De Triangulis Sphæricis.

CAPVT PRIMVM.

TRianguli Sphærici latera simul sumpta, sunt minora duobus semicirculis. *Reg.*39.3.

Trianguli Sphęrici tres anguli simul sumpti, duobus rectis sunt majores, vel sex rectis minores. *Reg.*49.3.

In quolibet Triangulo Sphærico duo anguli majores sunt differentiâ inter reliquum & semicirculum. Itaque
Continuato latere angulus exterior duobus interioribus oppositis minor est.

In quolibet Triangulo Sphærico, differentia summæ duorum angulorum & integri Circuli major est differentiâ reliqui anguli & semicirculi.

Trianguli Sphærici Rectanguli crura sunt ejusdem affectionis cujus sunt anguli ipsis oppositi. *Reg.*3.4.

Trianguli Sphærici Rectanguli, si crus alterum sit quadrans, erit etiam hypotenusa quadrans: Sin utrumque sit affectionis ejusdem, hypotenusa erit quadrante minor; sin diversæ, major. Et contra. *Reg.*4. & 5.4.

Trianguli Sphærici Rectanguli, si alteruter angulorum ad hypotenusam rectus sit, hypotenusa erit quadrans; Sin uterque affectionis ejusdem, minor; sin diversæ, major. Et contra. *Reg.*6.7.4.

In Triangulo Sphærico Rectangulo, uterlibet obliquorum major est complemento alterius, minor autem differentiâ ejusdem complementi ad semicirculum.

Trianguli Sphærici Obliquanguli, si omnes anguli acuti sint, erit latus quodvis quadrante minus. *Reg.*9.4.

Trianguli Sphærici Obliquanguli; Si duo anguli acuti æquales sint, erunt latera iis opposita quadrantibus minora; sin obtusi, majora. *Reg.*10.11.4.

Trianguli Sphærici Obliquanguli, si duo anguli acuti inæquales sint, erit latus minori eorum oppositum quadrante minus; sin obtusi maiori, majus. *Reg.*12.13.4.

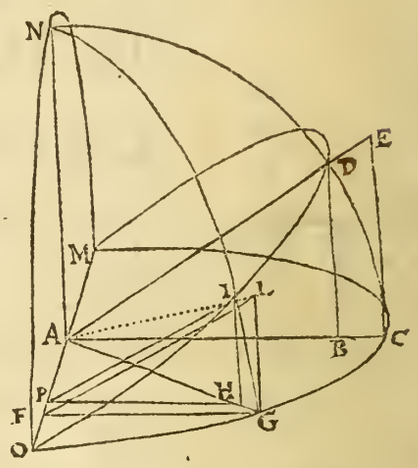
In quolibet Triangulo Sphærico Obliquangulo, si anguli ad Basim sint ejusdem affectionis, perpendicularis a vertice cadit Intra; at Extra si diversæ. *Reg.*8.4.

CAPVT II.

AXIOMA I.

In Triangulis Sphæricis Rectangulis, ſi idem ſit angulus acutus ad Baſim,

Sinus Hypotenuſarum, Sinubus ſuorum perpendiculorum ſunt proportionales; & contra.



Sit M C O N quarta Sphærę pars; M C O ſemiſſis plani Æquinoctialis; cujus polus N. O I D M ſemiſſis plani Eclipticæ. N D C quadrans Coluri Solſtitiorum: M N O ſemiſſis plani Coluri Æquinoctiorum. N I G quadrans Circuli alicujus Meridiani, qui cum Coluris, Æquatorem ad angulos rectos, Eclipticam verò ad obliquos ſecat. In hac Sphæræ quadrante duo conſtituuntur Triangula Sphærica Rectangula D O C & I O G quorum Hypotenuſæ ſunt D O & I O. Perpendiculares D C, I G. Baſes autem O C & O G. Angulus ad Baſes acutus D O C, I O G. Sinus verò Hypotenuſarum O D, O I ſint rectæ A D Sinus Totus, & P I. Sinus perpendicularium D C, I G ſint rectæ D B, I H. Ajo Sinus Hypotenuſarum A D, P I Sinubus perpendicularium D B, I H proportionales eſſe. Et contra.

Sunt enim Triangula B A D, P H I, ſimilia. Quia rectæ D B, I H perpendiculares inſiſtunt eidem plano; Et parallelæ etiam D A, I P, ſunt in eodem Eclipticæ plano, eandemque habent inclinationem; Anguli item D B A, D A B, angulis I H P, I P H æquantur, ergo & reliqui A D B, P I H æquantur. Quoniam itaque Triangula ſunt ęquiangula, ſunt etiam & latera eorum homologa proportionalia. Ajo itaque

Proport.
- *Sinus Hypotenuſæ* A D . P I.
- *Sinus Perpendic.* D B . I H.
- *Sinus Hypotenuſæ* P I . A D.
- *Sinus Perpendic.* I H . D B.

Et contra

Proport.
- *Sinus Perpendic.* D B . I H.
- *Sinus Hypotenuſæ* D A . I P.
- *Sinus Perpendic.* I H . D B.
- *Sinus Hypotenuſæ* I P . D A.

Quod erat demonſtrandum.

AXIOMA II.

In Triangulis Sphæricis Rectangulis, ſi idem ſit angulus acutus ad Baſim,

Sinus Baſium, Tangentibus ſuorum Perpendiculorum ſunt proportionales; Et contra.

In præcedente ſchemate & iiſdem Triangulis D O C, I O G, Sinus Baſium O C & O G ſunt A C & F G; Tangentes autem Perpendiculorum D C, I G ſunt C E & G L. Ajo Sinus Baſium A C, F G Tangentibus Perpendiculorum C E, G L. Item Tangentes Perpendiculorum C E, G L Sinubus Baſium A C, F G proportionales eſſe.

Proport.
- *Sinus* A C . F G.
- *Tang. Perpendic.* C E . G L.
- *Sinus* F G . A C.
- *Tang. Perpendic.* G L . C E.

Et contra

Proport.
- *Tang. Perpendic.* C E . G L.
- *Sinus* C A . G F.
- *Tang. Perpendic.* G L . C E.
- *Sinus* G F . C A.

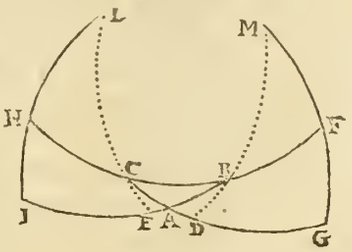
Axiomatis hujus demonſtratio iiſdem nititur fundamentis quibus & ſuperioris, Ideoque repetito labore non opus eſt.

Con-

Conſectarium 1.

Si a duobus angulis Trianguli, perpendiculares ducantur in latera oppoſita; Sinus Angulorum, Sinubus Perpendicularium ſunt directe proportionales; Et contra. per Axiom. 1.

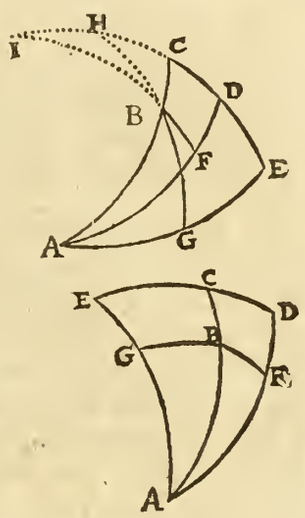
In Triangulo A B C, a polis M & L ducantur perpendiculares C E, B D in latera oppoſita & continuata, & ſint arcus H I, F G menſuræ angulorum C B A, B C A. Ajo Sinum anguli C B E (id eſt Sinum arcus H I) eſſe ad Sinum anguli B C A (vel arcus F G) ut Sinus C E ad Sinum B D. Sunt enim



Proport. { *Sinus Totus* B H . . C F. / *Sinus* H I . . F G. / *Sinus* B C . . C B. / *Sinus* C E . . B D. } Ergo Proport. { H I. / C E. / F G. / B D. } & alterne Proport. { H I. / F G. / C E. / B D. }

Poterimus etiam Conſectarium iſtud aliter exprimere, hunc ſcilicet in modum. Si tres Arcus majorum Circulorum in eodem puncto concurrant. & a quolibet puncto unius ducantur perpendiculares ad reliquos,

Sinus Angulorum a dictis perpendicularibus ſubtenſorum, Sinubus Perpendicularium ſunt proportionales; Et contra.



Sint tres Arcus majorum Circulorum A C, A D, A E, concurrentes in puncto A; a puncto etiam B & e polis I & H ducantur B F, B G, perpendiculares arcubus A D, A E. Sunto etiam C D, C E menſuræ angulorũ C A D, C A E. Ajo Sinus C D, C E Sinubus perpendicularium B F, B G, proportionales eſſe. Nam

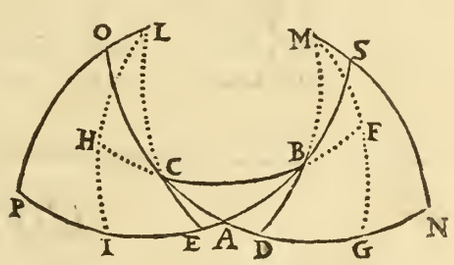
Proport. { *Sinus Totus* A C . A C. / *Sinus Hyp.* A B . A B. / *Sinus Ang.* C D . C E. / *Sinus Perp.* B F . B G. } Ergo Proport. { C D / B F / C E / B G } Et contra Proport. { B F. / C D. / B G. / C E. }

Quod erat demonſtrandum.

Conſectarium 2.

Si duo arcus perpendiculares ſubtendant angulos æquales; Sinus Perpendicularium, Sinubus Hypotenuſarium ſunt proportionales; & contra.

Sint Anguli C A E, B A D æquales, quia verticales, quos ſubtendant perpendiculares C E, B D a polis ſcil: L & M ducti. Ajo Sinus perpendicularium C E, B D Sinubus Hypotenuſarum C A, B A, proportionales eſſe; Et contra. Eſt enim Sinus anguli S A N (id eſt arcus S N) æqualis Sinui O P vel anguli O A P. Ajo itaque.



Proport. { *Sinus* S N . O P. / *Sinus Totus* S A . O A. / *Sinus Perp.* B D . C E. / *Sinus Hyp.* B A . C A. } Ergo Proport. { *Sinus Perp.* B D. / *Sinus Hyp.* B A. / *Sinus Perp.* C E. / *Sinus Hyp.* C A. } Et contra Proport. { *Sinus Hyp.* B A. / *Sinus Perp.* B D. / *Sinus Hyp.* C A. / *Sinus Perp.* C E. }

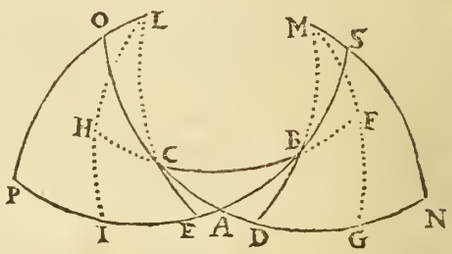
Quod erat demonſtrandum.

Con-

Consectarium 3.

Sinus Angulorum Sinubus oppositorum Laterum sunt Proportionales; & contra.

Esto Triangulum Obliquangulum adjuncti schematis C A B. Ajo Sinus angulorum C B A, B C A esse Sinubus laterum C A, B A proportionales: Sunt enim Sinus angulorum H I, F G proportionales Sinubus perpendicularium C E, B D *per Consect.* 1. Item Sinus Hypotenusarum C A, B A proportionales iisdem Sinubus perpendicularium C E, B D *per Consectar.* 2. Ajo itaque.

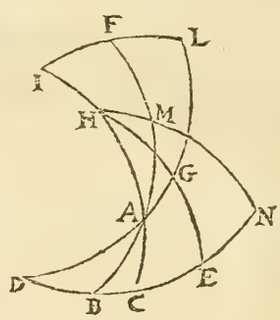


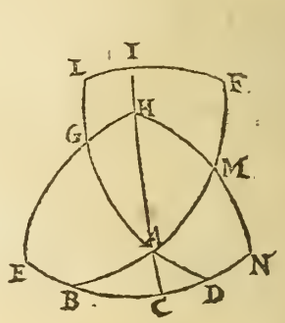
Proport. { *Sinus anguli* H I. / *Sinus Hypot.* C A. / *Sinus anguli* F G. / *Sinus Hypot.* B A. } Et contra *Proport.* { *Sinus Hyp.* C A. / *Sinus ang.* H I. / *Sinus Hyp.* B A. / *Sinus ang.* F G. } Quod erat demonstrandum.

Consectarium 4.

In Triangulis Obliquangulis: *Si perpendicularis ducatur ab angulo verticali in latus oppositum (si opus sit continuatum;) Sinus complementorum angulorum ad Basim, Sinubus angulorum ad verticem sunt directè proportionales; Et contra.*

In Triangulo Obliquangulo A B D, a vertice A ducatur perpendicularis A C. Et continuatis lateribus B A, D A unà cum perpendiculo A C usque ad quadrantes, videlicet A L, A F, A I; ab A vertice describatur peripheria I F L, mensura angulorum verticalium I A F, I A L, qui æquantur angulis B A C, D A C. Et a punctis angularibus B & D arcus quadrantales describantur H G E, H M N.





Ajo Sinus H G, H M (complementorum scilicet angulorum ad Basim A D B, A B C,) Sinubus angulorum ad verticem L I, F I, proportionales esse. Sunt enim *per Consect.* 1.

Proport. { *Sinus* / *Sinus Totus* / *Sinus* / *Sinus* } A H . A H. / A I . A I. / H G . H M. / I L . I F.

Ergo *Proport.* { *Sinus* H G. / *Sinus* H M. / *Sinus* I L. / *Sinus* I F. } Et contra

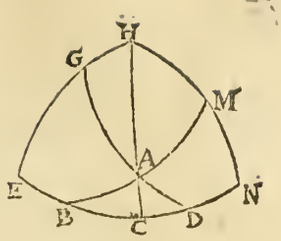
Quod erat demonstrandum.

Consectarium 5.

In Triangulis Obliquangulis: *Si perpendicularis ducatur ab angulo verticali in latus oppositum (si opus sit continuatum;) Sinus complementorum segmentorum Basis, Sinubus complementorum laterum anguli verticalis a quo perpendicularis ducitur, sunt directe proportionales.*

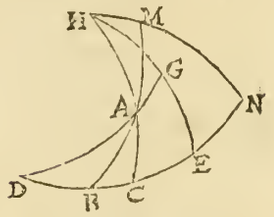
In

In Triangulo Obliquangulo A B D, a vertice A cadat perpendicularis A C in Basim D B, quæ cum lateribus continuetur ad quadrantes usque. Ajo Sinus complementorum segmentorum Basis C N, C E, Sinubus complementorum laterum A M, A G, proportionales esse. Sunt enim *per Consect.* 1.



Proport. { *Sinus Totus* H C. H C. / *Sinus* H A. H A. / *Sinus* C N. C E. / *Sinus* A M. A G. } Ergo *Proport.* { *Sinus* C N. / *Sinus* A M. / *Sinus* C E. / *Sinus* A G. } Et contra *Proport.* { A M. / C N. / A G. / C E. }

Quod erat demonstrandum.



Consectarium 6.

In Triangulis Obliquangulis: *Si perpendicularis ducatur ab angulo verticali in latus oppositum (si opus sit continuatum;) Sinus segmentorum Basis, Tangentibus angulorum Basi conterminorum, sunt reciproce proportionales; Et contra.*

In Triangulo Obliquangulo superioris schematis A B D, a vertice A ducatur perpendicularis A C in Basim D B; quæ cum lateribus continuetur usque ad quadrantes. A punctis quoque angularibus D & B & e polo H describantur arcus quadrantales H E, H N. Ajo Sinus segmentorum Basis C D, B C, Tangentibus angulorum conterminorum N M, E G, esse reciproce proportionales. Sunt enim *per Axioma* 2.

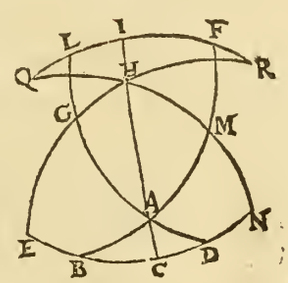
Proport. { *Sinus* D C. B C. / *Tang.* C A. C A. / *Radius* D E. B N. / *Tang.* E G. NM. } *Ergo excluſis intermedius, erunt* *Proport.* { *Sinus* D C. / *Sinus* B C. / *Tang.* NM. / *Tang.* E G. } & alterne *Proport.* { B C. / D C. / E G. / NM. } Et contra.

Quod erat demonstrandum.

Consectarium 7.

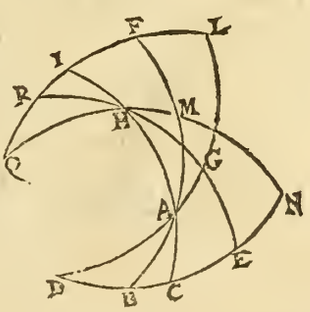
In Triangulis Obliquangulis: *Si perpendicularis ducatur ab angulo verticali in latus oppositum (si opus sit continuatum;) Sinus complementorum angulorum verticalium, Tangentibus laterum sunt reciproce proportionales; & contra.*

In Triangulo Obliquangulo A B D, a vertice A peripheria describatur Q I R, nec non a punctis angularibus B & D peripheriæ N M Q, E G R. Continuatisque lateribus A B, A D, unà cum perpendiculari A C ad F, L & I usque, erunt Tangentes L G, F M æquales lateribus A D, A B. Erunt etiam arcus I R, I Q Sinus complementorum angulorum verticalium C A D, C A B, quorum mensuræ sunt L I, I F. Ajo itaque Sinus I R, I Q complementorum angulorum verticalium, Tangentibus laterum F M, L G reciproce proportionales esse. Sunt enim *per Axioma* 2.



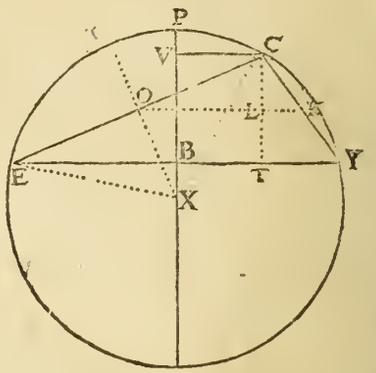
Proport. { *Sinus* Q I. R I. / *Tang.* I H. I H. / *Radi.* Q F. R L. / *Tang.* F M. L G. } *Ergo excluſis intermedius, erunt* *Proport.* { *Sinus* Q I. / *Sinus* R I. / *Tang.* L G. / *Tang.* F M. } Et invers. { R I. / Q I. / F M. / L G. } et contra.

Quod erat demonstrandum.



LEMMA.

Datis duorum arcuum Sinubus verſis, erunt Sinus recti ſemiſummæ & ſemidifferentiæ eorundem arcuum, medii proportionales inter Sinum Totum & ſemiſſem differentiæ Sinuum verſorum.



Sunto arcus dati P E, P C & eorum Sinus verſi P B, P V, quorum differentia eſt B V. Summa datorum arcuum ſit E P C; Differentia eorundem C Y. Eſto Sinus ſemiſummæ E O vel O C. Sinus ſemidifferentiæ C K. Ajo E O, C K, medios proportionales eſſe inter X E, C L.

Sunt enim anguli E X O, C Y T, C K L æquales *per* 29. *Prop.* 3. Et anguli ad O & L recti. Sunt igitur Triangula X E O, K C L ſimilia, & X E, E O; K C, C L proportionales. Quod erat demonſtrandum.

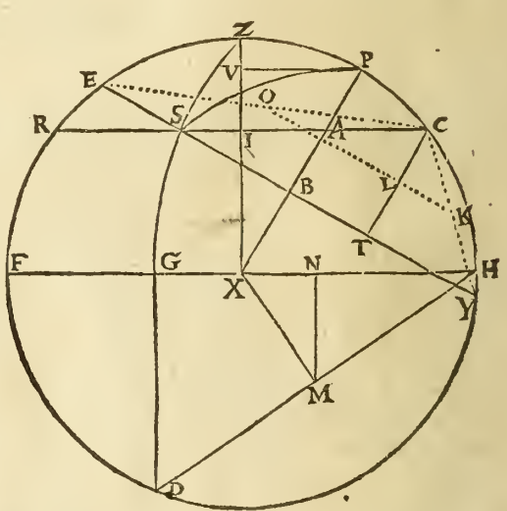
Conſectarium.

Si Triangulum E C Y circulo inſcribatur, & ab angulo quolibet E C Y ducatur perpendicularis C T in latus oppoſitum E Y: Semiſſes crurum dicti anguli O C, C K ſunt medii proportionales inter ſemiſſem perpendicularis C L, & ſemidiametrum X E. Rectangula ergo O C, C K: X E, C L æquantur.

PROPOSITIO.

In Triangulis Sphæricis univerſis quibus nota ſunt latera, erunt

Propoſit.
- *Rectangulum e Sinubus Laterum Angulum verticalem comprehendentium.*
- *Quadratum Radii.*
- *Rectangulum e Sinubus ſemiſummæ & ſemidifferentiæ Baſis & differentiæ Crurum.*
- *Quadratum Sinus ſemiſſis Anguli verticalis.*



Eſto Triangulum datorum laterum P Z S; & ſit angulus verticalis P Z S. Erunt Z S alterum Crus & Z C æqualia, & P C differentia Crurum: Erunt etiam P S Baſis anguli verticalis, & P Y, P E æquales, & C E ſumma Baſis & differentię Crurum, & C Y differentia earundem. Hæc omnia cognita ſunt. Ducantur P V Sinus Cruris P Z, & C I Sinus reliqui Cruris Z S qui continuetur in S. Ducantur item C T perpendicularis rectæ E Y, & O L K biſecans rectas E C, S C, C T, C Y. Sit etiam arcus H D menſura anguli verticalis P Z S, & recta M N perpendicularis rectæ H G biſecet rectas H G, H D; Ajo

Propoſit.
- Rectangulum e Sinubus datorum laterum P V, C I.
- Quadratum Radii P X.
- Rectangulum e Sinubus $\frac{1}{2}$ ſummæ & $\frac{1}{2}$ differentiæ Baſis & differentiæ Crurum; O C, C K.
- Quadratum Sinus ſemiſſis anguli verticalis H M.

Sunt

Sunt enim Triangula X P V, X A I, S A B, S C T æquiangula, ac propterea

Proport. { C T / C S / P V / P X } Item Proport. { C S. / H G. / C I. / H X. } Et idcirco oblonga ista proportionalia erunt { Oblong: C T, C S. / Oblong: C S, H G. / Oblong: P V, C I. / Oblong: P X, H X. }

Sunt etiam

Proport. { C T. / H G. / P V, C I obl: / P X quadrat: } vel Proport. { C L . . / H N . . / P V, C I obl: / P X Quadrat: } { sunt enim semisses rectarum C T, H G. } Item Proport. { C L. / H N. / C L, H X obl: / H N, H X obl: }

At verò æquantur *per Lemma*, oblonga { C L, H X. / O C, C K. } Item { Obl. H N, H X. quia sunt ut altitudines C L, H N. / Quadratum H M. *per Consect. 2. el. 4. l. 8. Rami.* }

Sunt igitur

Proport. { Oblongum P V, C I. / Quadratum P X. / Oblongum O C, C K. / Quadratum H M. } Quod erat demonstrandum.

CAPVT III.

De Triangulorum Sphæricorum Rectangulorum Dimensione.

ADminiculis hisce instructi, intima Triangulorum Sphæricorum adita penetrare non erit difficile: Primò itaque Rectangulorũ solutiones aggredimur.

Cum in omni Triangulo tria sunt latera & totidem anguli, si in Triangulo Sphærico harum sex partium aliqua sit graduum 90, reliquarum partium duę quæ proxime adjacent parti graduum 90, unà cum complementis trium reliquarum, dicuntur a viro Clarissimo *Barone Marchistonii* quinque partes circulares, quarum si duæ datæ fuerint, quælibet e tribus reliquis facile invenitur. Sunt enim

1. *Radius & Sinus cujuslibet partis assumptæ, medii proportionales inter Tangentes partium utrinque assumptæ parti proximarum vel circumpositarum.*

Sunt etiam (si pars assumpta sit remotior a duabus reliquis)

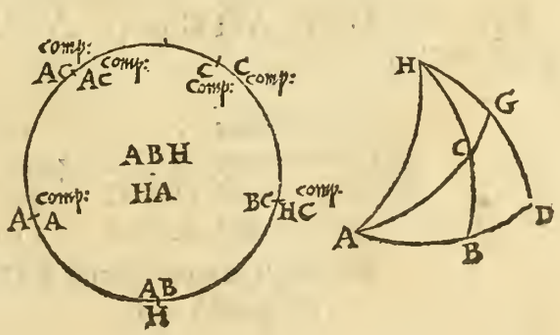
2. *Radius & Sinus partis assumptæ, medii proportionales inter Sinus complementorum partium oppositarum.*

Et si partes sumantur quatuor

3. *Sinus complementorum partium mediarum, sunt medii proportionales inter Tangentes extremarum.*

Tertia hæc Propositio licet vera sit, nullum tamen commodum habet usum, cum duæ datæ partes sufficiant ad expeditam inventionem tertiæ partis cujuscunque.

Quò hæc omnia sint magis manifesta, partes circulares Trianguli Rectanguli A B C sitæ sunt intra circulum, sintque singula latera quadrantibus minora, & anguli duo acuti: Partes autem Trianguli Obliquanguli A C H sunt positæ extra Circulum, sintque latera duo minora quadrantibus, & anguli his lateribus op-



positi

positi sunt acuti, tertius angulus quadranti oppositus est obtusus. Atque ut Propositionum istarum veritas facilius percipiatur, harum partium Logarithmos apponendos censui, ut eorum æqualitatem possimus de Sinuum & Tangentium proportionibus indicare.

		Logar. Sinuum.	*Log. Tangentium.*

PROBLEMA 2.

Datis Lateribus & Angulo ab iisdem comprehenso,
Quæritur LATVS *reliquum.*

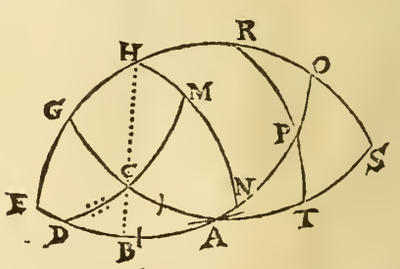
Ad hujus & subsequentium ferè omnium solutionem, pro quibus duæ requiruntur operationes, Triangulum Obliquangulum datum in duo Rectangula est reducendum, ope scilicet perpendicularis ductæ ab extremitate Lateris dati eâ, in cujus alterâ extremitate est Angulus datus. Quoniam autem in hoc & quibusdam Casibus sequentibus, duæ tales Laterum extremitates exhibentur, observandum est, in duobus tantummodò limitatione aliquâ opus esse; nempe cum *Anguli duo cum Latere ab iisdem comprehenso dati sunt, quæriturque Latus alterutrum reliquorum*, ut in 5 Probl. Et cum *Latera duo cum Angulo ab iisdem comprehenso data sunt, quæriturque Angulus alteruter reliquorum*, ut in 10. Probl. In illo enim perpendicularis ducenda est ab extremitate Lateri quæsito conterminâ; In hoc, ab extremitate Lateris Angulo quæsito oppositi.

In Triangulis itaque his Rectangulis quorum partes simili situ respondent, si singulę innotescunt, non latebunt etiam & Obliquanguli singulę. Ex iis verò, quæ Capiti tertio præfiximus, probè intellectis, singulas horum partes exquirere non erit difficilè; Excluså enim perpendiculari unà cum Radio, quemadmodũ *ad Conſectaria 4.5.6.7. Capitis ſecundi* præcepimus; erunt Sinus vel Tangentes partis mediæ alterius Trianguli & extremæ reliqui, medii proportionales inter Sinus vel Tangentes partis mediæ reliqui & extremæ alterius Trianguli. Nos autem majoris perspicuitatis ergo, demonstrativè Problematum subsequentium resolutiones figillatim aggredimur. Quoniam verò perpendicularis ab angulo verticali dimittenda, aliquando intra, quandoque extra Triangulum cadit, prout anguli ad Basim ejusdem vel diversæ fuerint affectionis, idcirco ne ulla calculo adhęreat remora, duo apposuimus schemata iisdem consignata litteris, ut Rationis Termini, nec non Illustratio Arithmetica, utrisque inserviant.

In Triangulo Obliquangulo A C D quæritur Latus D C,

			1. *Superioris schematis.*	2. *Infer. schem.*
Datis	Lateribus	A D *gr.* 42:	8′:47″ 9286	24: 3′:54″ 6667
		A C *gr.* 30:	0′: 0″ 0000	30. 0′: 0″ 0000
	Angulo	D A C *gr.* 36:	7′:52″ 4478	103:59′:57″ 5028

Hoc & nonnulla ut dixi subsequentia Problemata duplici indigent praxi, quarum prior inventioni segmentorum Basis aut Angulorum verticalium subservit, altera verò Angulorum aut Laterum quæsitorum.



Termini Rationum.

I. Pro Segmento Basis. Per Probl. 6. Cap. 3.

Proport.
- *Radius.*
- *Tangens Hypotenusæ.*
- *Sinus complementi Anguli dati.*
- *Tangens segmenti Basis Angulo dato conterminii; Atque inde reliquum segmentum.*

Problema istud conversum est undecimi, eundemque in modum solvitur, si modò Anguli in Latera permutentur. Duo enim Anguli minores semper æquantur duobus Lateribus Trianguli comprehensi ab arcubus majorum circulorum a polis eorundem ductorum. Tertius autem Angulus esse potest major quadrante, & idcirco complementum ejus ad semicirculum sumi potest commodissimè pro tertio Latere. Angulus autem ubi inventus fuerit, erit unus e tribus quæsitis Lateribus; Inventis autem ex iisdem uno, reliqua per proportionis regulam *juxta Probl.* 1. invenientur.

Vt in Triangulo A C D, horum arcuum poli sunt H, R, Q, & illius Latera æquantur hujus Angulis; A D æqualis angulo ad H vel arcui E N. D C angulo Q vel arcui M F. & A C angulo H R F vel arcui G L. Idcirco si dati sint Anguli A. D. C. dantur Latera Q R. Q H. R H. Angulus autem C D E vel M N æquatur Lateri Q H. Resolvatur itaque Triangulum Q R H, *secundum præceptum Problematis* 11.

CAPVT V.

VT omnia minimo cum labore fiant. 1.

Si quæſita exquiſitè cognoſcere cupis, pro ſcrupulis tertiis, quartis, &c. utere partibus ſecundorum decimis, centeſimis, milleſimis, &c. quemadmodum Nos in præcedentibus fecimus, quoniam operationes Arithmeticæ harum ope commodius abſolvuntur. Scrupula autem iſta in partes hujuſmodi facillimè reduci poſſunt, hoc ſcilicet modo.

Scribe primùm ſcrupula tertia, deinde quarta ſupra tertia, ita ut quartorum nota dextra (intellige cyphram ad ſiniſtram eſſe adjungendam ſive imaginandam, quòd ſi unicâ exprimantur) ponatur uno loco dextrorſum promotiore, atque ſupra quarta eodem modo etiam quinta, & ſic deinceps. Deinde divide ſcrupula ſupe-

riora (additis quotlibet cyphris) per 6, ſtatuendo quotum ad dextram proximè inferiorum, iſtaque iterum divide per 6, & quotum ſcribe ut antea, ſic continuando uſque addiviſionem tertiorum partiumque eorundem, quotus ultimus dabit partes quæſitas. Cujus rei ſpecimen in hoc Exemplo videre licet, in quo $24''' 50'''' 28''''' $ reducuntur in $\frac{41402}{100000}$ partes ſcrupuli ſecundi.

28	00
50	467
24	8411
	41402

Contra ſi partes hujuſmodi ſunt reducendę in ſcrupula tertia, quarta, quinta, &c. multiplicentur datæ partes per 60, & à facto amputatis dextrorſum tot locis quot ſunt in Numeratore datarum partium, reliqui erunt ſcrupula tertia, notæ autem amputatę indicant partes ſcrupuli tertij, quibus iterum multiplicatis per 60, & à facto abſciſſis tot notis quot antea, reliquæ erunt ſcrupula quarta, & ſic comparantur etiam quinta, ut hic vides.

$28'''''$	32000

2. Pro inventione partis proportionalis per differentias Logarithmorum multiplicationis operatione inveſtigandæ, compendium hoc non eſt inutile.

Primò ſcribe differentiam Logarithmorum pro numero multiplicando. Deinde ſub illo numerum multiplicantem, ſtatuendo primam notam multiplicantis ſub penultimâ multiplicandi, & reliquas ordine inde contrario: tùm in multiplicatione incipe ad illam notam multiplicandi, quæ eſt ſupra notam multiplicantis, ſervatâ ratione incrementi, quod è ſubſequentibus notis multiplicandi ſuppeditatur.

I. EXEMPLVM.

Differentia Logarithmorum numerorum 18761 & 18762 eſt 231481. Quòd ſi habere velis partem inde proportionalem quæ debetur $\frac{11055}{100000}$. vulgari modo differentia 231481 eſt ducenda in 11055, & à facto amputandæ quinque notæ, ut ſupra pag. 4. monuimus. Sic
